WHAT CABINET DO I NEED?

So you're ready to order your DIY flat packs but need a little bit of clarification on which cabinetry you need? Look no further, here we give you an idea of different areas of your house, and what types of cabinets you may need to help complete your project.

1. Base Cabinets

Base Cabinet Units are generally the foundation of your kitchen, bathroom, laundry, wardrobe, office or even garage. They are cupboards that are placed under a bench top, or stacked in combination with other cabinets (such as tall cabinets) or used on their own to create unique cabinetry that fits your requirements. Base cabinets come in a range of variants including units with doors, drawers, open shelving or even units that accommodate ovens and wine racks.

2. Upper Cabinets

Upper Cabinet Units (also known as Wall or Overhead Cabinets) are perfect for getting the most storage space into your project area whether it be for your kitchen, garage or even office. These cabinets are typically affixed on the wall above your bench, and come in a variety of single & double door units, open shelving units as well as cabinets to accommodate range hoods.

3. Tall or Pantry Cabinets

Tall or Pantry Cabinet Units are normally used as to cover larger areas of your kitchen, garage, laundry or wardrobe and are perfect for storing appliances and more. We have a range of Tall & Pantry Cabinets to suit your needs, including units with doors, inner drawers, open shelving or wall oven units.

4. Applied Panels

Applied Panels are, by definition, panels which are applied to the side of cabinets to which are on the end of a run of cabinets. They are typically made from the material which is the same colour as your doors and create a finished look by covering exposed cabinet carcass panels. Applied panels can also be used in between cabinetry – for example: the Tall Cabinet (number 3) in the picture has an applied panel on both of its sides to complete the unit. Without this applied panel, the inside of the cabinet underneath the Upper Cabinet would be exposed. If your cabinets are all the same depth and height, and you do not need to create a space in between them, then you will not need to place an applied panel in between cabinets.

5. Kickboards

Kickboards are used to cover the exposed adjustable legs along the bottom of the base cabinets. Kickboard creates a clean finished look to your cabinetry.

COMPONENTRY

STANDARD INNER DRAWERS

The base cabinets with inner drawers come with two drawer finish options. The budget option goStandard consists of METABOX inner drawers. You can use this tried and tested box system for many different applications in kitchens, hallways, bathrooms and offices – and it's even suitable for workshops. Robust materials and careful workmanship produce high stability – up to a maximum dynamic carrying capacity of 30kg.

EXECUTIVE INNER DRAWERS

The second option available for selection is the goExecutive Inner drawers. Comprising the Blum TANDEMBOX Antaro inner drawer system; it is stylish, durable and smooth.

Apex Woodworks is a customised self install cabinet solution for kitchens, bathrooms, wardrobes, laundries, office spaces and even garages. Our online ordering system allows the home handy person the opportunity to plan, design, order and build their own project.

Apex Woodworks will save you \$1000s in labour which means you can allocate more of your budget to getting a premium kitchen – or save the money and put it in your pocket for a rainy day. The DIY component is key with our flat pack engineered system, ideal for the home handy person, if your willing to have a go then Apex Woodworks is for you.
